WIPO FOR OFFICIAL USE ONLY

II. Executive summary

The use of this minimal specification provides multiple benefits to the implementing PCT member states or international authorities and to the International Bureau (IB) in terms of data compatibility, reduction of inconsistencies and cost (through reductions in document printing, shipping, storage and disposal).

In addition to PCT-EDI service, the International Bureau has developed secure Web Services to encourage PCT member states to take immediate advantage of machine-to-machine interface through electronic document and data exchange with the International Bureau.

The following requirements were considered during the development of this minimal specification:

- The specification should be sufficiently simple to both permit and encourage its implementation by any PCT member state office or international authority at a minimum cost.
- The specification should be sufficiently flexible to allow the transmission of both scanned documents and electronically authored documents.
- The specification should be “exchange media neutral”, e.g. it should make no assumptions as to the media used for electronic exchange.
- The specification should be upward compatible with the new WIPO Standard ST.36 standard by using similar document structures.
- The specification should facilitate efficient processing by the PCT Operations division at the International Bureau, reducing the administrative overhead and facilitating the creation of the electronic publication working copy.

Offices are strongly encouraged to transfer documents using Annex F format (compliant with the WIPO Standard ST.36 format) to the International Bureau as a first choice, using unstructured formats only when their internal systems are not yet capable of processing documents fully compliant with WIPO Standard ST.36.

WIPO FOR OFFICIAL USE ONLY

III. Format Specification

The format specification is designed for simplicity and ease of implementation at the lowest possible cost. It consists of six (originally five) basic requirements, based primarily upon existing WIPO standards and guidelines:

1. Supported Document Formats

Each document is represented by a single file.

The following file formats and types are supported by the International Bureau (listed in order of preference):

Format	*Description*	*Extension*
PCT Annex F / WIPO Standard ST.36	PCT Annex F / WIPO, Standard ST.36 documents stored as Wrapped Application Documents (WAD)s or Wrapped and Signed Packages (WASP)s as per Annex F of the PCT Administrative Instructions (Primarily PCT E-filing record copies as defined in Annex F of the PCT Administrative Instructions).	.wsp (signed) .wad (unsigned)
Adobe PDF Format	Adobe PDF representations of documents, without encryption or other security protections. PDF-format documents should be in accordance with Annex F of the PCT Administrative Instructions. Fonts should be embedded where possible because where they are not embedded the documents may not be correctly rendered to images (screen, paper, tiff).	.pdf
TIFF image based Documents (normally the result of scanning documents)	A set of black and white (ONE BIT PER PIXEL, not greyscale) TIFF V6, single strip, Intel encoded (little-endian) single A4 pages. Each page is represented by a single file, scanned at 300 dpi resolution and so identified in the TIFF header. Multi-page TIFF files are not supported. The set of document page files is transferred either: a) zipped into a wrapper file, the order of the pages being obtained by applying an alphabetic sort operation of the single page filenames, (e.g. TIFF page images, numbered 000001.tif – nnnnnn.tif) or b) in a PDF format file (TIFF images embedded in PDF)	.zip .pdf

WIPO FOR OFFICIAL USE ONLY

Format	Description	Extension
Machine Readable Character-coded data as per Bilateral Agreement	Other electronically authored documents: in certain cases, a specific format may be transmitted under bilateral agreement with the International Bureau (e.g. Microsoft Word 97 and up, non Annex F compliant PDF formats, RTF, etc). These formats are not desirable and can lead to problems for both parties (the IB and the sending RO).	.doc
Sequence Listings	Sequence listings stored in ST.25 format, each contained in a zip file wrapper.	.zip
As-filed packages	A package containing files in any format, "as received" by the sending office, though expected to contain files in the formats mentioned on this page.	.wsp .wad .zip
Pre-conversion packages	A package containing files in any format, though expected to contain files in the formats mentioned on this page.	.wsp .wad .zip

2. Supported Document Types

The document types defined in detail in the Annex are supported.

Any document not exactly corresponding to one of those document types shall be sent with the document type designation of "other". This means that the International Bureau will visually check the document and determine the associated PCT document type, potentially splitting the document into several sub documents or merging it with others, before examining it. The use of the "other" document type should be avoided whenever possible.

The document types were originally directly obtained from the set of electronic filing DTDs published on the WIPO web site (http://www.wipo.int/), and have subsequently been added to as required. This permits electronic documents sent to the International Bureau to be easily transferred later to other parties (Designated Offices, etc.) using WIPO Standard ST.36 data encoding, and allows the offices a migration path to full WIPO Standard ST.36 support.

3. Document Wrapper Format

a. Batch format

The documents are transmitted in batches and stored in a zip file containing folders.

The zip file is named as follows:

RO-{OO}-yyyymmdd-nnnnnn{-ROLE-CODE}.zip

Where:

RO is the WIPO Standard ST.3 code of the transmitting office. Optionally "{OO}" may be included as destination e.g. "US-IB-…".

WIPO FOR OFFICIAL USE ONLY

yyyymmdd is the date of transmission in local office time, not the date that the package was put together (in this case 20070213)

nnnnnn is a sequential counter incremented with each wrapper file sent by the office,

And

optionally ROLE-CODE (RO|DO|EO|COR|ISA|SISA|IPEA|IB) may be included to direct the package to the correct operational unit within the office.

The Folders in the zip file are named using the PCT Number, including the 'PCT' prefix (ia number below) with an optional series number appended to the PCT number:

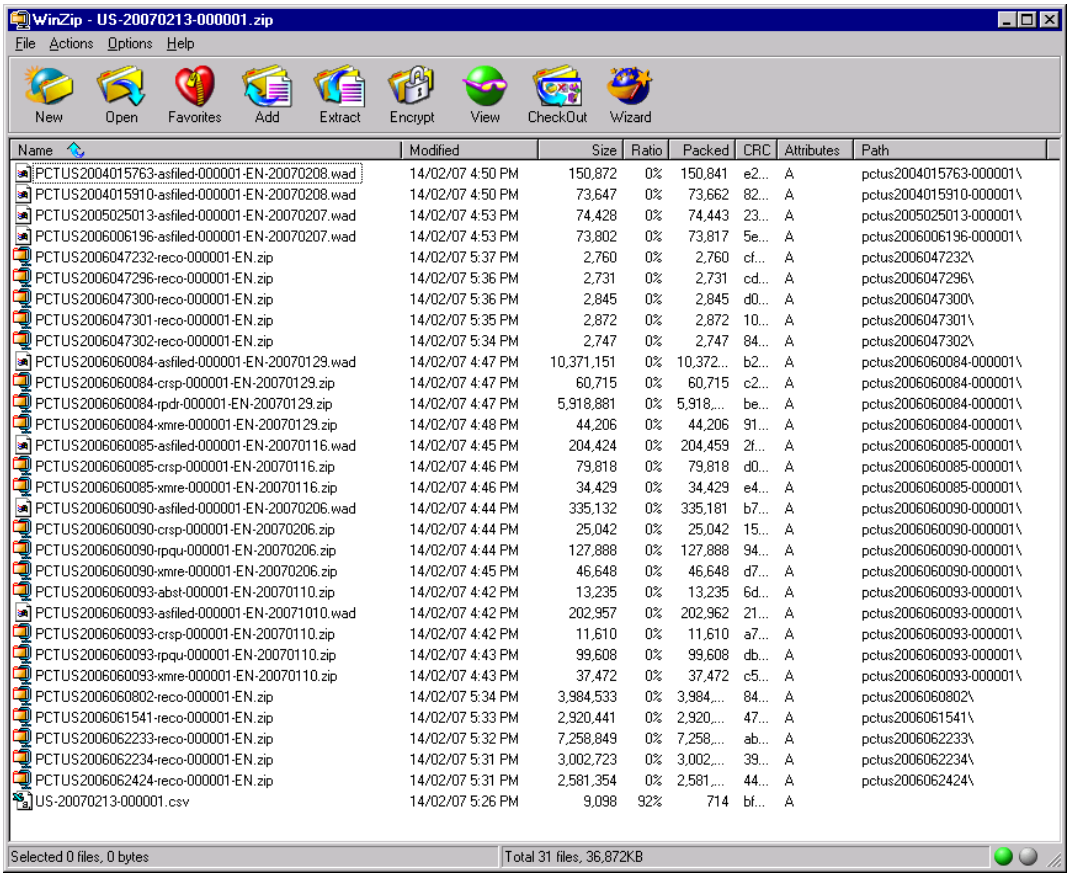

<ia number>[-<series-number>] Series number is optional

The naming structure allows for the grouping of documents into business transactions – where a letter is attached to another document etc. Thus in the case where the RO has one or more documents for an IA that has no known grouping they should be sent in a folder simply using the IA number (i.e pctKR2006123456); in the case where there are groups of documents for an IA they should be sent in a folder with the IA Number and a series number (i.e. pctKR2006123456-000001) – if there are 2 groups for an IA then a second folder would be expected (i.e. pctKR2006123456-000002) and if there is a single grouping plus some 'other' unrelated documents then we would expect folders pctKR2006123456 and pctKR2006123456-000001

A CSV file is in the root directory of the zip file (with the same name as the zip file (csv replacing zip).

The image below shows a screenshot of a package received from US.

WIPO FOR OFFICIAL USE ONLY

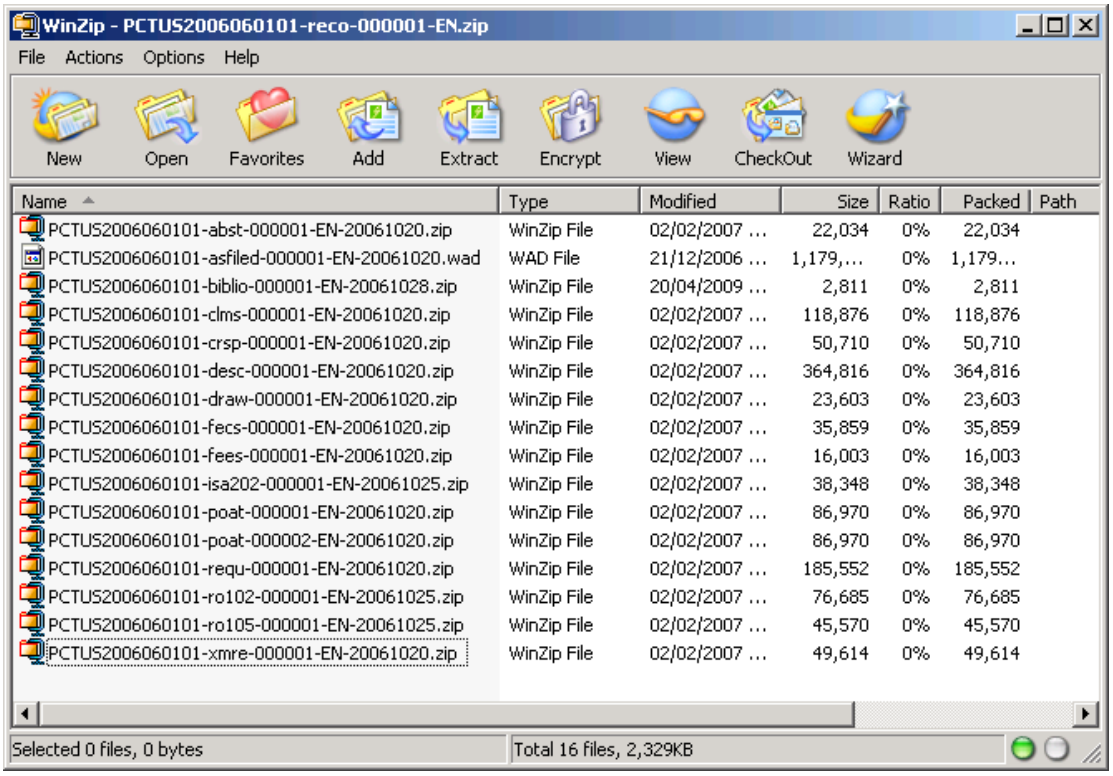

b. Document Packaging for Scanned record copies

For scanned record copies, the collection of sub-documents, such as abstract or claims etc, may optionally be gathered together into a single zip file (see screenshot below) as an indication of the integrity of the record copy that is inserted into the batch transfer package to be sent by an office; alternatively the record copy sub-documents may simply be sent in their individual zip files.

In EITHER case, all the contained documents must be named according to the minimum-specification [this document].

WIPO FOR OFFICIAL USE ONLY

It should be noted that

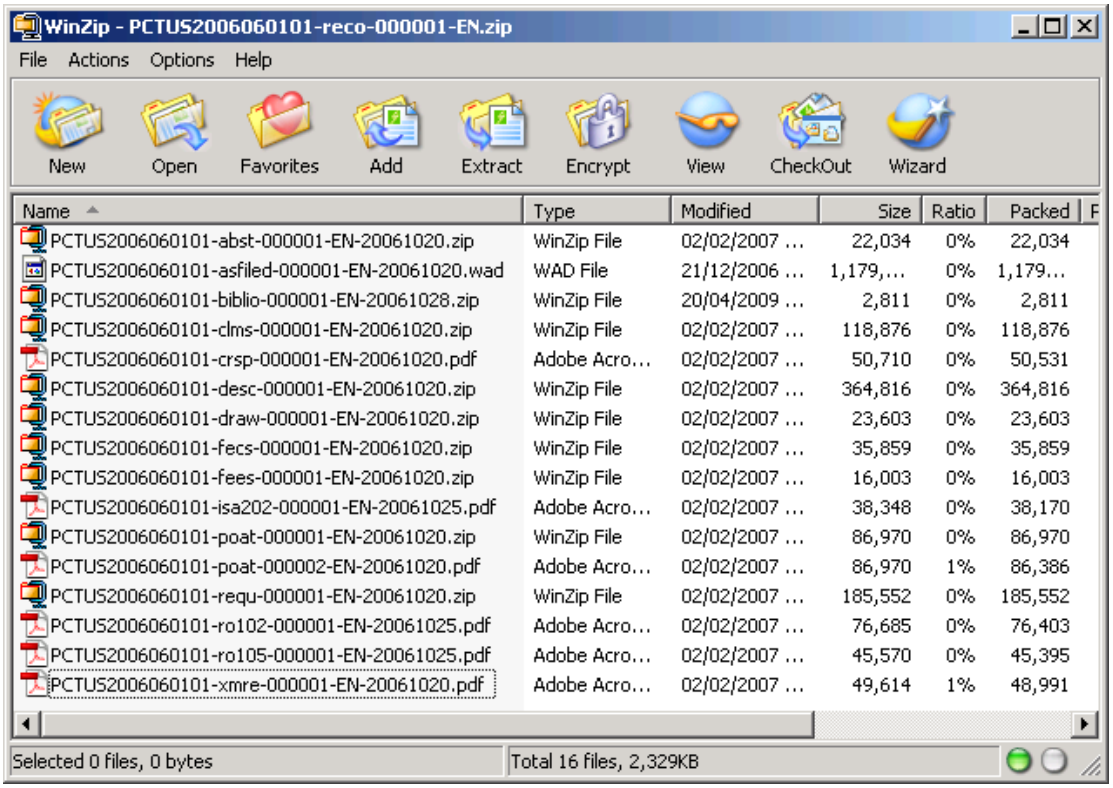

- not all the contents, in the example above, have the same type of date specified by the last field value, thus the differing values above (defined by document type in the table in the Annex);
- all the files included in the package, with the exception of the ‘biblio’ and ‘asfiled’ files may be included as ZIP or PDF format files that contain TIFF images;
- the ‘biblio’ file must always be a ZIP file containing XML content files

and

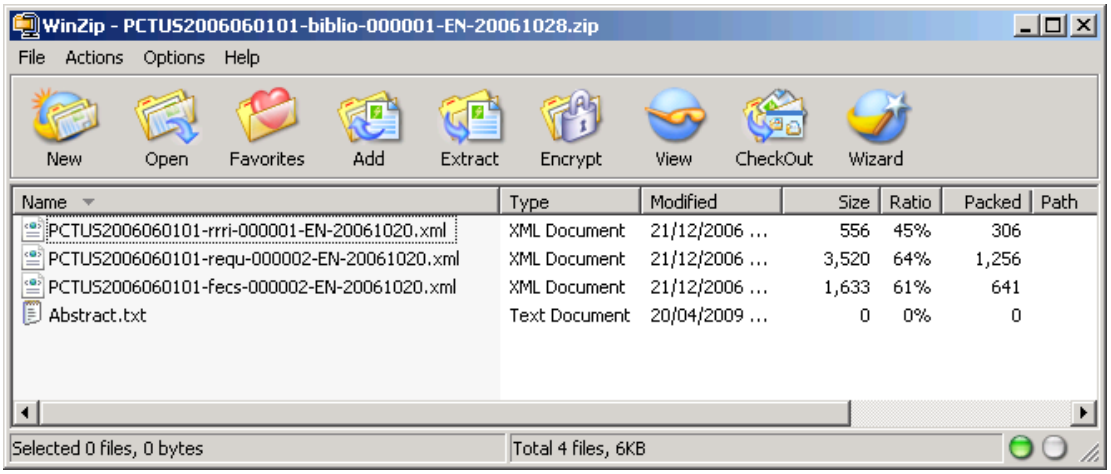

- the ‘asfiled’ package is optional and must be supplied as a WAD format file (where the scanned documents were submitted in electronic form to the receiving Office).

The following example shows the same application structure as above, having some of the files in PDF format:

WIPO FOR OFFICIAL USE ONLY

The ‘biblio’ file included in the above example must contain all of the XML and text format contents shown in the screenshot below (‘rrri’, ‘requ’, ‘fecs’, ‘abstract’):

4. Document Wrapper Naming Convention

The name of a wrapper file is composed of either five or six consecutive parts separated by dashes (using an extended version of the Annex F File Naming Conventions; excluding the extension and including the optional part which may be empty):

WIPO FOR OFFICIAL USE ONLY

- The PCT number including the prefix ‘PCT’.
- The document type code in lower case (see the annex for the document types).
- A numeric string NNNNNN to make the filename unique within its directory NNNNNN is a number right justified and padded with leading zeros.
- The upper case ISO639 code representing the language of the document or XX if unknown.
- Any optional additional bibliographic data information (format depending on the document type, see Annex).
- An optional document status code ”-corrected” to be used where a corrected version document previously supplied is furnished (corrected in business terms).
- The appropriate file extension.

Note that for characters uppercase is preferred for readability, but the EDI service is character case independent for file and folder names.

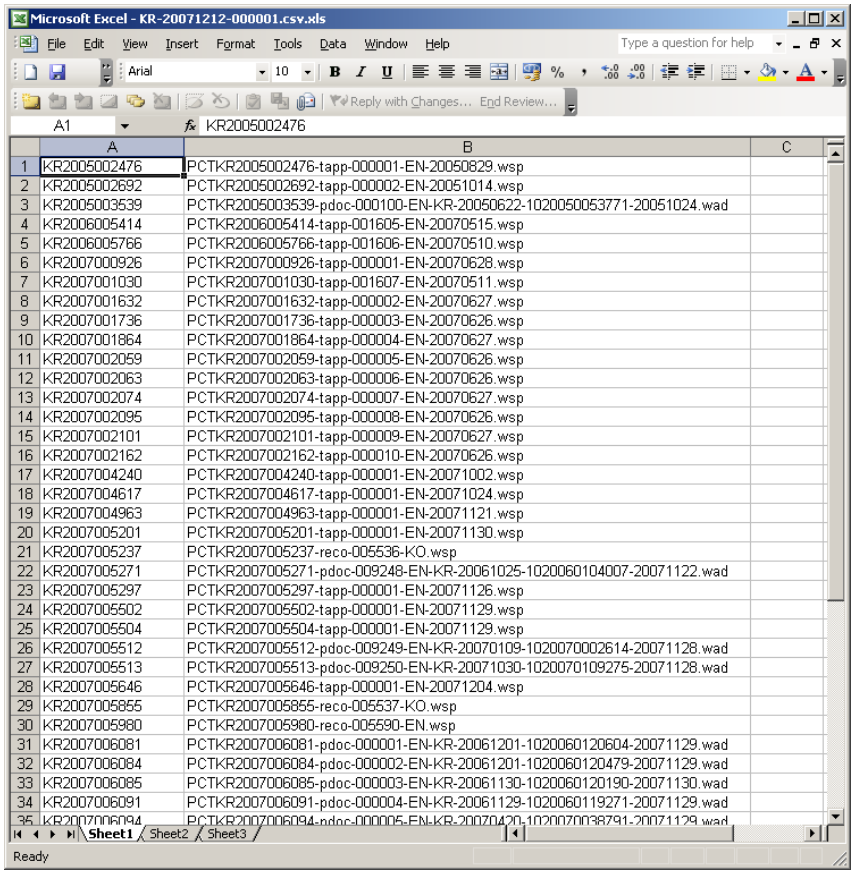

Refer to the table in the Annex for examples.

5. Document Index Data

The transmitted documents are accompanied by an index file in Comma Separated Value (csv) format. This index file is saved under the level 1 directory. Its name is composed of the level 1 directory name with the extension .csv. The CSV file contains an entry for each transmitted document, with the first column containing the PCT number (and the optional sequence number i.e. it is the folder name within the zip file) and the second column the name of the document file. This index allows confirmation that no documents were lost in the document’s processing path.

Example of .CSV file:

6. Exceptional Document Uploads

This rule is applicable for documents satisfying the conditions below:

- Record copy filings subject to national security concerns
- Very large documents (e.g. 1 gigabyte in size)

These document uploads require special handling and the provisions for their handling are as follows:

(a) Record copy filings subject to national security concerns

The security statement should be uploaded as part of a normal package with the document type ‘secu’ as specified in the Annex.

(b) Very large documents

either

Create a special batch containing only the very large document (or documents as appropriate;

or

Send individual files to the IB on DVD with an appropriate covering letter.

Name each file in accordance with Rule 2

Do package the documents in accordance with Rule 3.
