Statements by the Republic of Kazakhstan on the Agenda Items of SCP/38

Agenda Item 6. Quality of Patents, Including Opposition Systems

Sub-item 5. Sharing Session on the Use of Tools, Including Artificial Intelligence

Mr. Chair,

The Republic of Kazakhstan attaches great importance to improving patent quality and patent examination, including through the use of modern digital technologies.

In this regard, we are particularly interested in exchanging experience on the use of various tools, including artificial intelligence, to improve the efficiency of patent examination, as well as discussing the challenges faced by intellectual property offices in developing, implementing and using such tools.

At present, artificial intelligence technologies are not yet used in the examination of patent applications in Kazakhstan. Nevertheless, we are closely studying international experience and considering the gradual introduction of appropriate tools in the future.

It should be noted that, on November 17, 2025, Kazakhstan adopted Law No. 230-VIII "On Artificial Intelligence", which establishes a legal framework for the development, use and regulation of AI systems and sets out the principles of safety, transparency and accountability.

Kazakhstan is interested in continuing the exchange of experience and practices with other national offices on the use of artificial intelligence in patent examination.

Thank you, Mr. Chair.
